A groundbreaking approach to training doctors could transform the future of health care. For decades, physicians have been trained on the textbook of the body, from the corpse in a cadaver lab to the patient in a procedure suite. This type of training usually leads them to specialize in specific organs or systems and breeds an increasingly impersonal view of medicine in which the importance of person-to-person care--the hallmark of a good relationship between doctors and patients--has been lost. In this engrossing narrative, you'll meet seven extraordinary students who embarked on a new way to train doctors that attempts to regain what's been lost. These medical students follow patients instead of physicians, accompanying patients to primary care appointments, emergency room visits, and even surgical procedures.

**Wild Life**
Shinrin-Yoku and The Practice of Healing through Nature**By Stefan Batorijs**

In an increasingly urbanised world, the need to reconnect with nature is more important than ever. Originating from Japan, Shinrin-Yoku (translated to 'Forest Bathing') is a therapeutic invitation to immerse oneself in the embrace of the woods and wild places.

Covering both the philosophy and the practicalities, this is an evidence-based guide for practitioners seeking to increase their ecological awareness, explore the mental, emotional, and immunological healing capabilities of Shinrin-Yoku, and learn how to incorporate it into their practice.

Building on the necessary in-person training, this book will help practitioners feel confident in guiding others in the woods as they discover their own connection to nature and is underpinned by a thorough understanding of the science behind the healing.

Practical in its approach but spiritual and poetic in its nature, this timely book provides the knowledge and skills required to adopt Shinrin-Yoku into any therapist's toolbox.

Yoga Therapy for the Whole Mother

Developing Awareness in Service of Postpartum Healing

By *Julia Irene Romano*

One of the first of its kind, this is an authoritative and professional yoga therapy text offering a comprehensive overview of postpartum conditions and guidance on how to manage them using yoga therapy as both a lens and a toolbox. Rather than focussing on returning a woman's body to its pre-birth condition, this guide recentres emphasis on the mother's healing in body, mind, and spirit and guides practitioners in how to facilitate this transition. This book is centred on the pancamaya model which views the individual as a composite of five separate but interrelated layers including the physical, the breath-energetic, the psycho-emotional, the capacity for discernment, and awe.

Experiential Anatomy

Therapeutic Applications of Embodied Movement and Awareness

By *Leila Stuart*

Experiential anatomy is an embodied learning method integrating interoceptive awareness and conscious movement to support whole-person healing. It takes a holistic, subjective approach, viewing the body as a doorway into deeper self-awareness and self-understanding that can support greater agency and restore mind-body balance and health. Focused intellectual learning and gentle somatic inquiry are interwoven to engage students multidimensionally. This illustrated guide to therapeutic applications of experiential anatomy uses yoga therapy as a framework for somatic exploration. After introducing key foundational and learning principles, subsequent chapters simplify complex anatomical information into digestible components that are integrated into accessible therapeutic practices.

How many educators have read a book, attended a conference, or pursue college or graduate work in how the brain learns? When the editors of Research-Informed Teaching asked their colleagues, they found that only 20% had. That discovery led to a strategic decision by their school-they would train 100% of their current and future teachers and administrators in the science of teaching learning, using the promising principles, research, and strategies in mind, brain, and education (MBE). The editors started collecting cases of MBE in action, resulting in this compilation of research-informed stories that will engage the reader in the transformative work of using research to inform their practice in a way befitting what it means to be an evidence-informed educator.
