Mario Mikulincer | Phillip R. Shaver

Attachment Theory Expanded

Security Dynamics in Individuals, Dyads, Groups, and Societies

By *Mario Mikulincer, Phillip R. Shaver*

From pioneering attachment researchers, this book takes an expansive look at the nature and functions of security dynamics in personal and social relationships. Mario Mikulincer and Phillip R. Shaver examine how attachment operates not only in close dyadic relationships (parent-child, romantic partners), but also between teachers and students, therapists and clients, physicians and patients, leaders and followers, and within organizations. Also considered is the nature of "attachments" to objects; commercial brands; substances, such as foods and drugs; and places. The book highlights ways to integrate attachment theory with other influential social and psychological theories concerning factors that enable individuals, groups, and societies to flourish despite inevitable threats, conflicts, and losses.

Mario Mikulincer | Phillip R. Shaver

Attachment Theory Applied

Fostering Personal Growth through Healthy Relationships

By *Mario Mikulincer*

In this compelling book, prominent investigators Mario Mikulincer and Phillip R. Shaver review the state of the science of attachment-based interventions in psychotherapy and beyond. They critically evaluate a range of programs that aim to strengthen parent-child, couple, and therapist-client relationships. The theoretical and empirical underpinnings of each intervention are examined, as are specific techniques used to enhance felt security and foster personal growth. The book also looks at evidence-based interventions outside the mental health domain, including programs that target teacher-student relationships and academic performance.

Linda A. Camras

Emotional Development across the Lifespan

By *Linda A Camras*

Unique in its dual focus on emotion and lifespan development, this text weaves together theory, research, and practical clinical implications for fostering children's emotional well-being. The author examines how emotions are experienced, expressed, understood, and regulated from infancy through later adulthood, surveying both typical and atypical development. For each stage, chapters highlight the interrelated influences of temperament, neurobiology, and the social environment, and distinguish universal processes from those that vary across cultures. The book presents current knowledge about specific emotions, probes the causes and consequences of emotional maladjustment, and reviews evidence-based and promising interventions. Innovative methods, examples, and meta-analyses are described; key terms are defined within chapters and in an end-of-book glossary.

Child Development 4/e

A Practitioner's Guide

By Douglas Davies, Michael F Troy

Now in a revised and updated fourth edition, this trusted text and professional resource provides a developmental framework for clinical practice. The authors examine how children's trajectories are shaped by transactions among family relationships, brain development, and the social environment. Risk and resilience factors in each of these domains are highlighted. Covering infancy, toddlerhood, the preschool years, and middle childhood, the text explores how children of different ages typically behave, think, and relate to others. Developmentally informed approaches to assessment and intervention are illustrated by vivid case examples. Observation exercises and quick-reference summaries of each developmental stage facilitate learning.

The Developing Mind 3/e

How Relationships and the Brain Interact to Shape Who We Are

By Daniel J. Siegel

This highly influential work--now in a revised and expanded third edition incorporating major advances in the field--gives clinicians, educators, and students a new understanding of what the mind is, how it grows, and how to promote healthy development and resilience. Daniel J. Siegel synthesizes cutting-edge research from multiple disciplines, revealing the ways in which neural processes are fundamentally shaped by interpersonal relationships throughout life. And even when early experiences are not optimal, building deeper connections to other people and to one's own internal experience remains a powerful resource for growth. Professors praise the book's utility in courses from developmental psychology and child development to neuroscience and counseling.

Ordinary Magic

Resilience in Development

By Ann S. Masten

From a pioneering researcher, this book synthesizes the best current knowledge on resilience in children and adolescents. Ann S. Masten explores what allows certain individuals to thrive and adapt despite adverse circumstances, such as poverty, chronic family problems, or exposure to trauma. Coverage encompasses the neurobiology of resilience as well as the role of major contexts of development: families, schools, and culture. Identifying key protective factors in early childhood and beyond, Masten provides a cogent framework for designing programs to promote resilience. Complex concepts are carefully defined and illustrated with real-world examples.

Community Psychology 4/e

Linking Individuals and Communities

By Bret Kloos, Jean Hill

The fourth edition of this acclaimed textbook provides an in-depth and engaging overview of community psychology, including its theoretical underpinnings and methods for conducting research and promoting change within communities. This book aims to get students, including nonpsychology majors, excited about the field and being agents of social change. New to this edition are an increased focus on values, particularly those related to social justice, empowering minority communities, and solving complex societal problems - like poverty, oppression, and climate change - across multiple ecological levels. New research and case examples present important developments in the field and society at large, accompanied by extensive discussion questions.

Going Global

How Psychologists Can Meet a World of Need

By Craig N. Shealy, Merry Bullock

This is the authoritative guide for current and future psychologists around the world who are or want to be engaged in international efforts and opportunities and meet pressing global needs. Psychologists are increasingly applying their knowledge, skills, and values to big picture issues such as sustainability, human rights, conflict resolution, global education, and religious and cultural understanding. However, education, training, and professional development often overlook "thinking and acting globally" as a vital component of the professional identities of psychologists. With decades of international experience as scholars, educators, practitioners, policymakers, and consultants, contributors to this book describe exemplary programs, relevant trends, and dynamic possibilities for global engagement.

Stress, Health, and Behavior

By Richard McCarty

Exposure to stressful life experiences can disrupt key regulatory systems in the body and contribute to a variety of negative health outcomes. This authoritative text takes a biopsychosocial approach to understanding the role of stress in alcohol use disorder, posttraumatic stress disorder, depression, cardiovascular disease, Type 2 diabetes, cancer, and other chronic diseases. It presents cutting-edge knowledge about how stressors are conceptualized and measured; connections to disease processes; systemic racism as a significant, ongoing stressor for people of color; and factors that promote resilience. For each of the disorders discussed, proven and promising stress-targeted clinical interventions are reviewed. Student-friendly features include an end-of-book glossary and an extensive bibliography to facilitate in-depth study of selected topics of interest.

Criminality in Context

The Psychological Foundations of Criminal Justice Reform

By *Craig Haney*

In this groundbreaking book that is built on decades of work on the front lines of the criminal justice system, expert psychologist Craig Haney encourages meaningful and lasting reform by changing the public narrative about who commits crime and why.

Based on his comprehensive review and analysis of the research, Haney offers a carefully framed and psychologically based blueprint for making the criminal justice system fairer, with strategies to reduce crime through proactive prevention instead of reactive punishment.

Haney meticulously reviews evidence documenting the ways in which a person's social history, institutional experiences, and present circumstances powerfully shape their life, with a special focus on the role of social, economic, and racial injustice in crime causation. Haney debunks the 'crime master narrative' - the widespread myth that criminality is a product of free and autonomous 'bad' choices - an increasingly anachronistic view that cannot bear the weight of contemporary psychological data and theory. This is a must-read for understanding what truly influences criminal behavior, and the strategies for prevention and rehabilitation that follow.

Psychological Science and the Law

By *Neil Brewer, Amy Bradfield Douglass*

Psychological research can provide constructive explanations of key problems in the criminal justice system--and can help generate solutions.

This state-of-the-art text dissects the psychological processes associated with fundamental legal questions: Is a suspect lying? Will an incarcerated individual be dangerous in the future? Is an eyewitness accurate? How can false memories be implanted? How do juries, experts, forensic examiners, and judges make decisions, and how can racial and other forms of bias be minimized?

Chapters offer up-to-date reviews of relevant theory, experimental methods, and empirical findings.

Specific recommendations are made for improving the quality of evidence and preserving the integrity of investigative and legal proceedings.
